Practical – 6

Practical Title: Rendering External JSON Data using Fetch API, Search and Filter

Problem Definition: Display event lists, student profiles, notices, or FAQs from external JSON files using Fetch API. Implement dynamic rendering, search, filter, sorting, and pagination..

Theory :

1. How is JSON fetched, parsed, and rendered?

JSON is fetched using the Fetch API, parsed using response.json(), and then rendered dynamically on the webpage using JavaScript DOM methods such as textContent or innerHTML.

2. Which array methods are used for search, filer, sort, and pagination?

filter() is used for search and filtering, sort() for sorting, and slice() for pagination.

3. How are loading and error states handled?

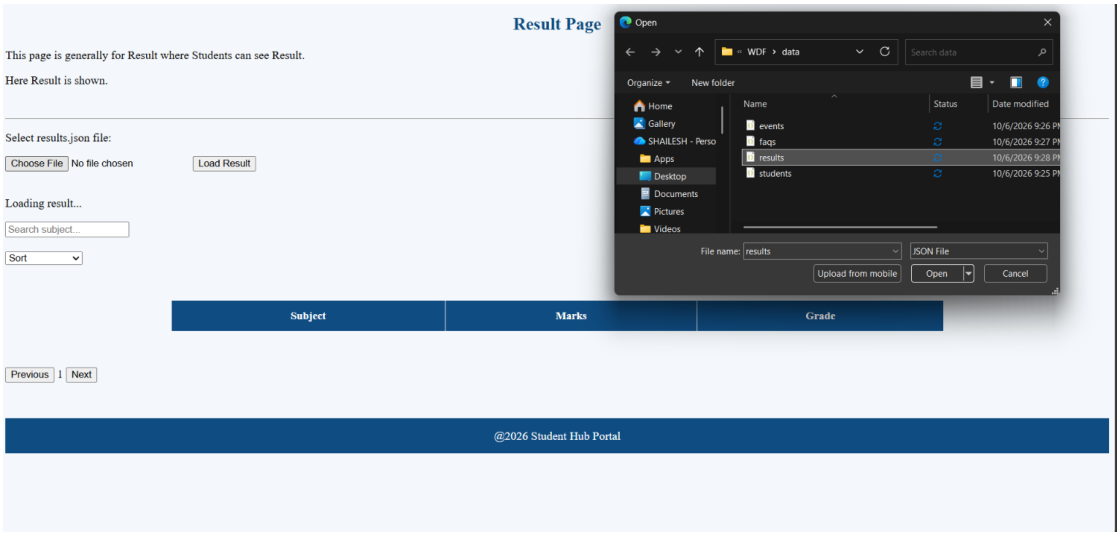

Loading is handled using the Fetch API, while errors are handled using the .catch() method and displayed in the browser console.

4. How is modularity maintained in JavaScript files?

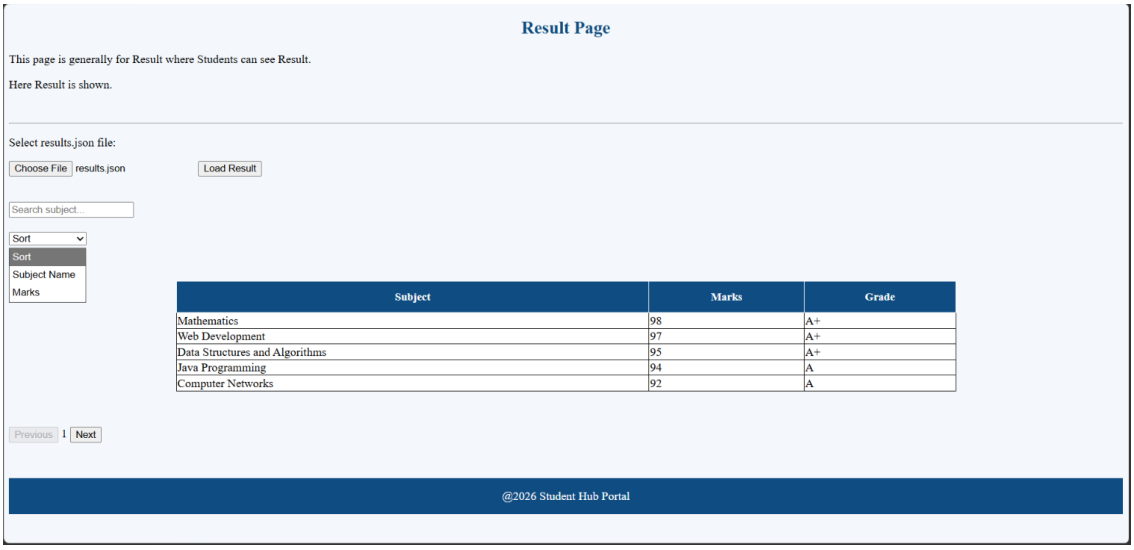

Modularity is maintained by using an external Javascript file and separating different functionalities into independent code sections or functions.

Implementation/ Output/Result validation of password and Email id using Regex: (Pages with JS)

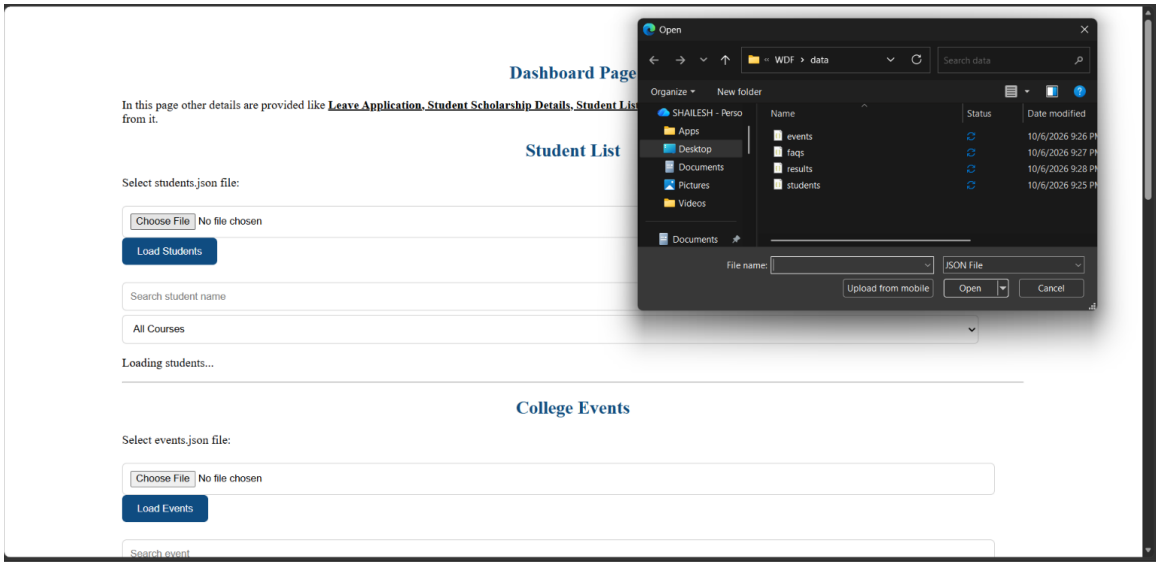

(1)JSON in Result page:

(2)Successfully fetch data using JSON:

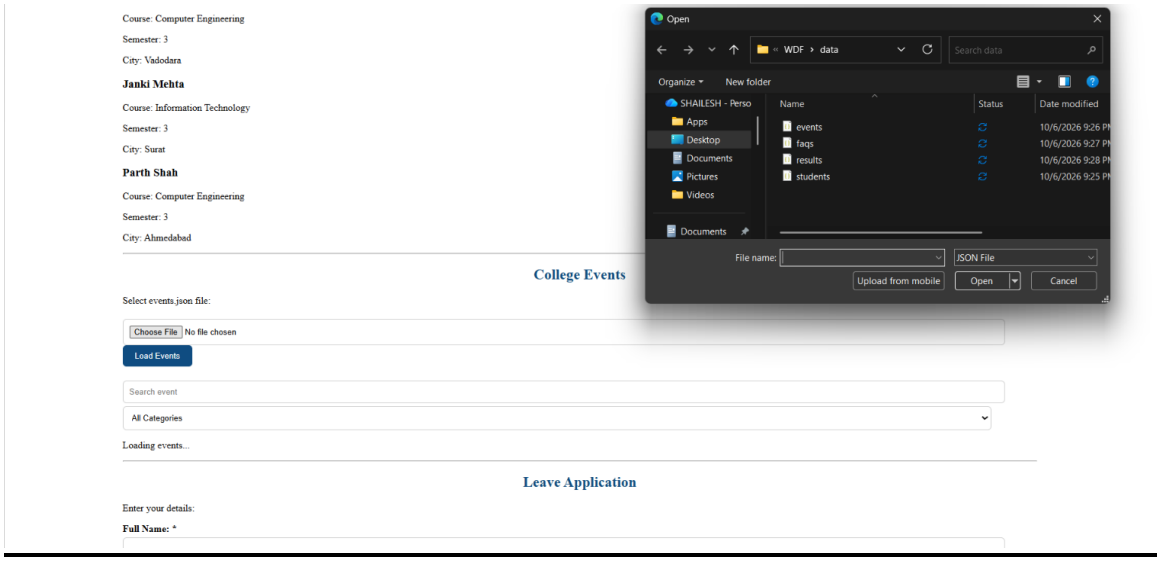

(3)Fetch data in Dashboard page:

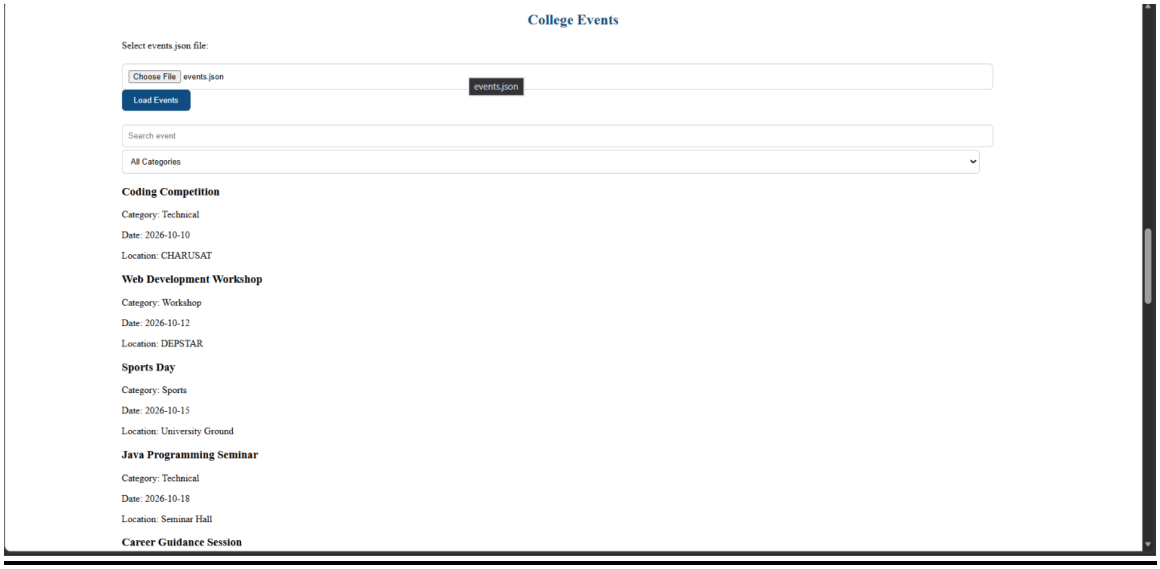

Check for events:

(4)Now Fetch data using JSON in contact page with FAQS(Frequently Asked Questions).

Contact Page

This page is generally for Contact where Students can Contact their Faculty and ask doubts. Here this website provides contact info below.

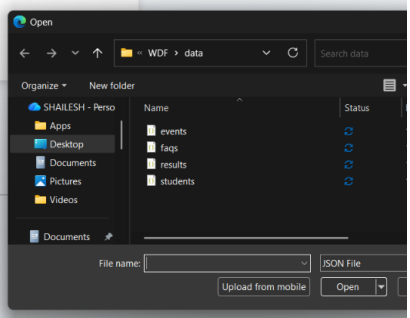

Contact

- XYZ Sir: 99898*****
- ABC Sir: 88787*****
- ABC Mam: 98757*****

If you have any query then also you can visit our Student Hub Portal website.

Here this website provides the link below.

Student Hub Portal

Frequently Asked Questions

Select faqs.json file:

Choose File No file chosen Load FAQs

Search question

Loading FAQs...

How can I check my result?

Open the Result section from the Student Hub dashboard.

How can I check my attendance?

Open the Attendance section from the Student Hub dashboard.

How can I update my profile?

Open the Profile section and update your information.

Where can I see assignments?

Open the Assignment section from the dashboard.

Where can I see upcoming events?

Upcoming events are displayed on the Home or Dashboard page.

How can I check my courses?

Open the Courses section from the Student Hub.

How can I contact the college?

Open the Contact section for contact information.

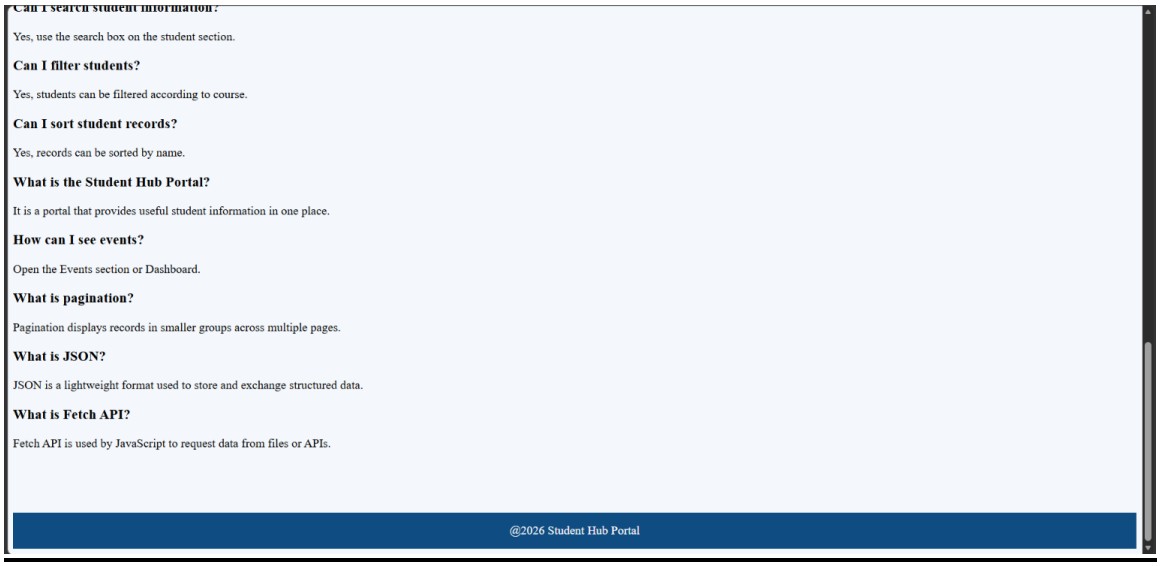

Can I search student information?

Yes, use the search box on the student section.

Can I filter students?

Yes, students can be filtered according to course.

Can I sort student records?

Learning Outcomes:

- Understand how to fetch and parse external JSON data using the Fetch API.
- Dynamically render JSON data on web pages using JavaScript.
- Implement search, filtering, sorting, and pagination using JavaScript array methods.
- Handle loading and error states while fetching data.
- Develop modular and reusable JavaScript code for dynamic web applications.

Faculty Remarks: (Keep this blank for faculty)
