Practical – 11

Practical Title: Student Management CRUD with Search and Filter.

Problem Definition: Create a student management module to add, view, edit, delete, search and filter student records. All database operations must use MYSQL I statements and clear success/failure messages.

Theory :

1. Are SELECT, INSERT, UPDATE, and DELETE operations working?

The INSERT operation is used to add new student records to the database. The SELECT operation displays the student records on the webpage. The UPDATE operation allows us to edit existing student details. The DELETE operation removes a selected student record from the database. In our practical, these operations are performed using PHP and MySQLi. These operations help us manage student information easily.

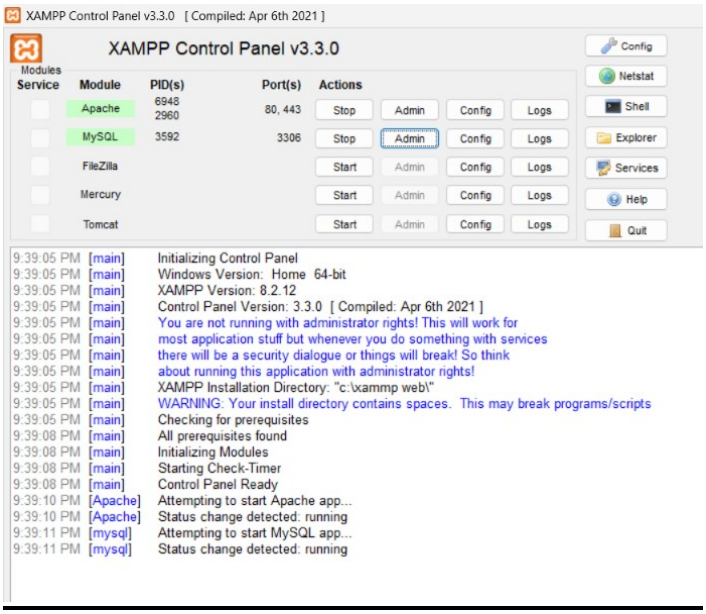

2. Is search by name/email/course implemented?

The search feature allows us to find student records using a name or email address. The filter feature displays students according to the selected course. We use SQL conditions such as LIKE to search for matching text. The course filter uses a condition to show only students from the selected course. These features make it easier to find specific student records. They are useful when the database contains many records.

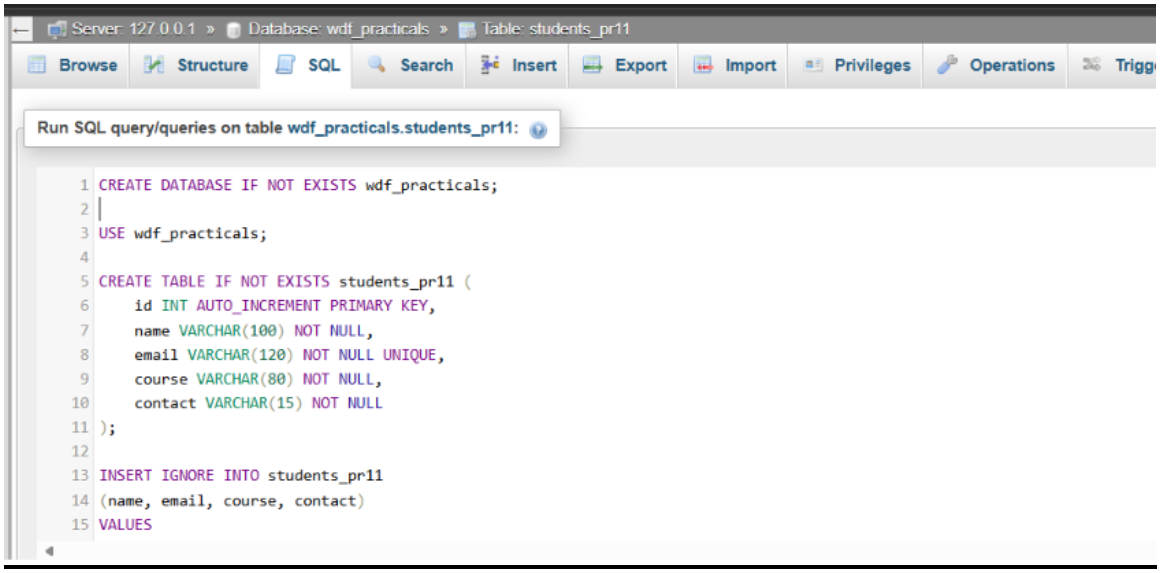

3. Are delete operations confirmed before execution?

Yes, a confirmation message is displayed before deleting a student record. In our practical, JavaScript's confirm() function asks the user whether they want to continue. If the user cancels, the deletion is stopped. If the user confirms, the form sends the request to PHP. PHP then deletes the selected record from the database. This helps prevent accidental deletion of student information.

(1)Start XAMMP Local Host Server(APACHE and MYSQL Start):

(2)DateBase and Table with SQL Query :

Server: 127.0.0.1 » Database: wdf_practicals » Table: students_pr11

Browse | Structure | SQL | Search | Insert | Export | Import | Privileges | Operations | Triggers

Run SQL query/queries on table wdf_practicals.students_pr11:

```
VALUES
('Meet Bhatti', 'meet11@example.com', 'Computer Engineering', '9876500001'),
('Aryan Patel', 'aryan11@example.com', 'Computer Engineering', '9876500002'),
('Jay Shah', 'jay11@example.com', 'Information Technology', '9876500003'),
('Riya Patel', 'riya11@example.com', 'Computer Engineering', '9876500004'),
('Krish Desai', 'krish11@example.com', 'Information Technology', '9876500005'),
('Neha Shah', 'neha11@example.com', 'Mechanical Engineering', '9876500006'),
('Rahul Joshi', 'rahul11@example.com', 'Computer Engineering', '9876500007'),
('Pooja Mehta', 'pooja11@example.com', 'Civil Engineering', '9876500008'),
('Dev Patel', 'dev11@example.com', 'Information Technology', '9876500009'),
('Kavya Shah', 'kavya11@example.com', 'Computer Engineering', '9876500010'),
('Harsh Dave', 'harsh11@example.com', 'Mechanical Engineering', '9876500011'),
('Nisha Patel', 'nisha11@example.com', 'Civil Engineering', '9876500012'),
('Aarav Shah', 'aarav11@example.com', 'Computer Engineering', '9876500013'),
('Mira Desai', 'mira11@example.com', 'Information Technology', '9876500014'),
('Dhruv Joshi', 'dhruv11@example.com', 'Computer Engineering', '9876500015'),
```

Learning Outcomes:

In this practical, I learned how to create a student management system using PHP and MySQL. I understood how to perform CRUD operations to add, view, update and delete student records. I learned to connect PHP with a MySQL database using MySQLi. I also implemented search functionality to find students by name or email and filtering to display students according to their course. I understood how prepared statements help protect database queries involving user input. I learned to display success and error messages and use a confirmation message before deleting records. Overall, this practical helped me understand how to develop a basic database-driven web application.
