Practical – 14

Practical Title : Admin Dashboard with Role-Based Access Control, Dynamic Menu, and Audit Log

Problem Definition: Develop an admin dashboard that displays user statistics, student count, event count and latest registrations. Restrict access to admin users only and show dynamic menu options based on role.

Theory :

1. Are dashboard values loaded dynamically from the database?

Yes, dashboard values are loaded dynamically from the MySQL database using PHP. The system retrieves the student count, event count and latest registrations. When the database records change, the dashboard can display the updated information.

2. Is access restricted to admin users?

Yes, access to the admin dashboard is restricted using Role-Based Access Control (RBAC). The system checks the logged-in user's role before allowing access. Students are denied access to the admin dashboard.

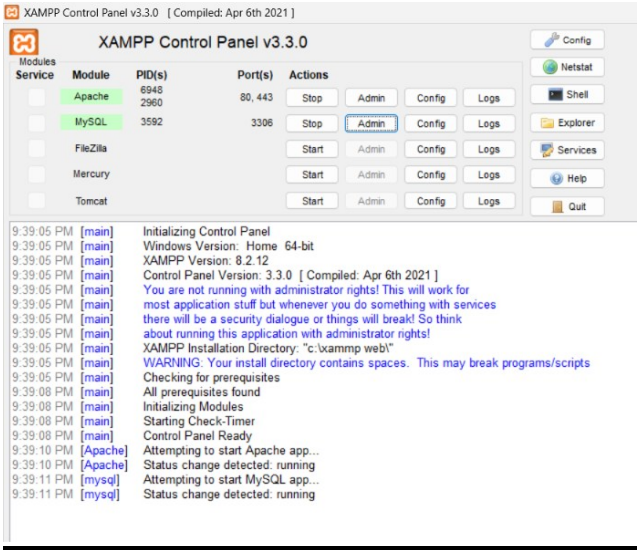

3. Are role-based menus working?

Yes, the navigation menu displays options according to the user's role. Admin users can access admin-related options, while student users see the student dashboard and logout options.

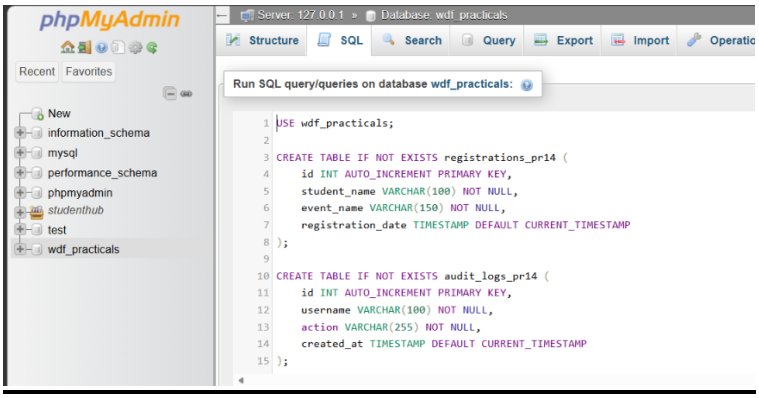

4. Are important admin actions recorded in audit_logs?

Yes, the system stores login and logout activities in the audit_logs_pr14 table. Each record contains the username, action and timestamp. The admin can view these records on the dashboard.

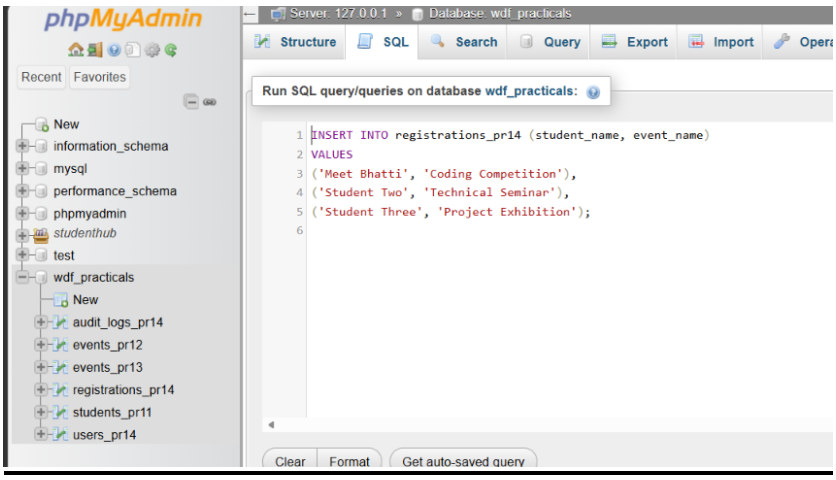

(1)Start XAMMP Local Host Server(APACHE and MYSQL Start):

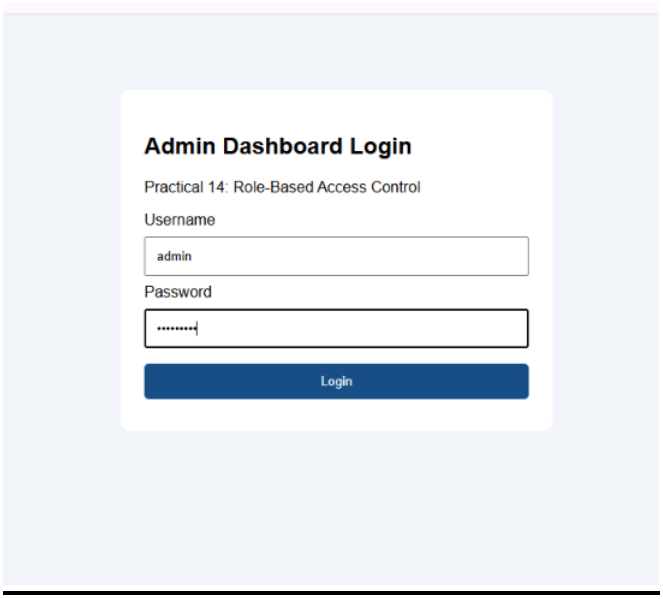

(2)For Login page crete table by inserting Query in Database :

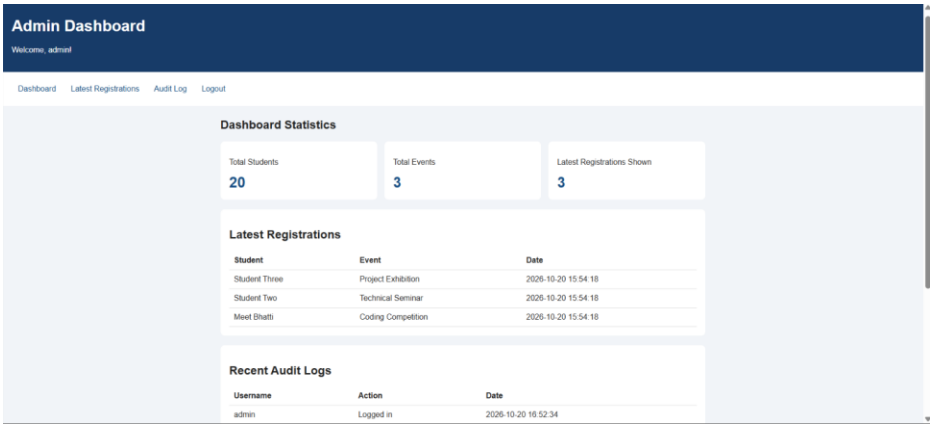

Add some Registrations by inserting SQL query in Database:

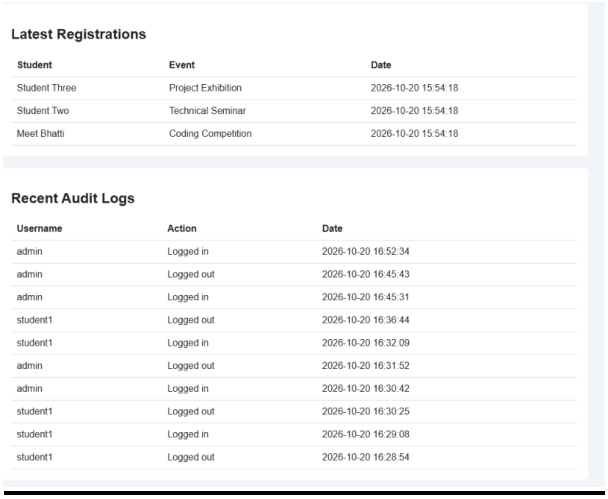

(3)Open Login Page and Try to Login as Admin :

(4)Login Successfully and can perform all tasks :

(5)Show Dashboard and Latest Registrations and Audit Logs :

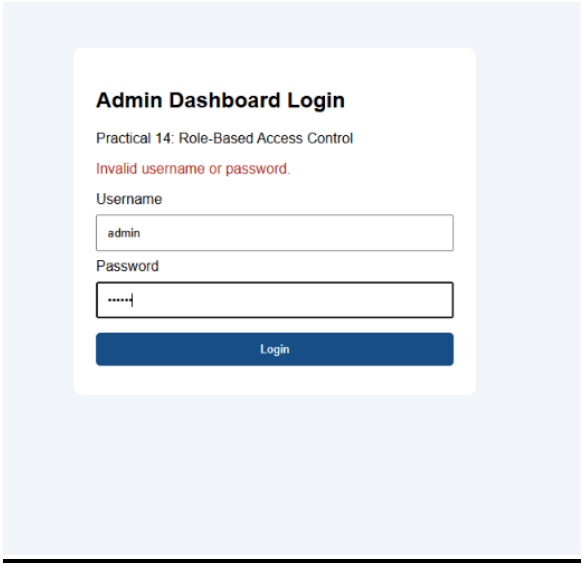

Latest Registrations

Student	Event	Date
Student Three	Project Exhibition	2026-10-20 15:54:18
Student Two	Technical Seminar	2026-10-20 15:54:18
Meet Bhatti	Coding Competition	2026-10-20 15:54:18

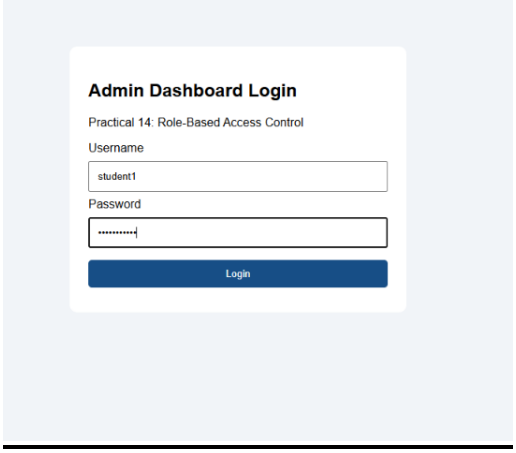

Recent Audit Logs

Username	Action	Date
admin	Logged in	2026-10-20 16:52:34
admin	Logged out	2026-10-20 16:45:43
admin	Logged in	2026-10-20 16:45:31
student1	Logged out	2026-10-20 16:36:44
student1	Logged in	2026-10-20 16:32:09
admin	Logged out	2026-10-20 16:31:52
admin	Logged in	2026-10-20 16:30:42
student1	Logged out	2026-10-20 16:30:25
student1	Logged in	2026-10-20 16:29:08
student1	Logged out	2026-10-20 16:28:54

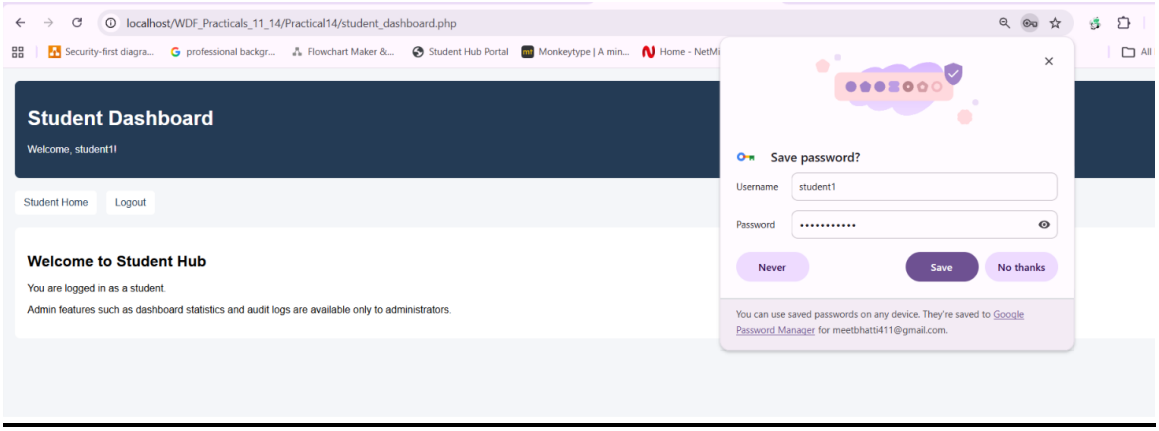

(6)Try to login with wrong password in Admin role:

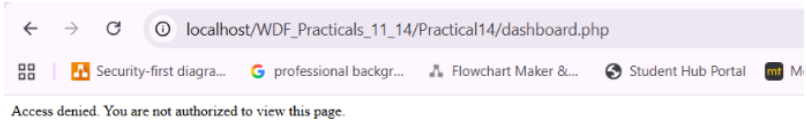

(7)Try to Login as Student :

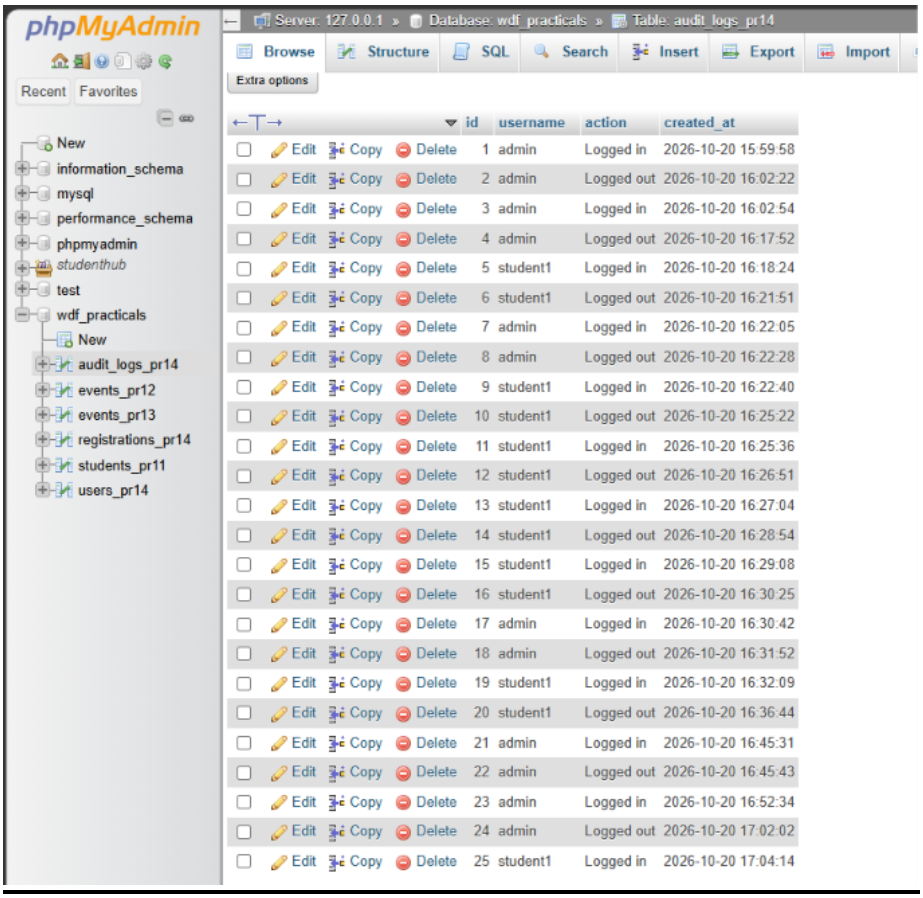

(8)Redirect student in student_dashboard:

(9)Try to login student as in Admin dashboard it shows error:

(10)Shows Audit Logs in database:

Learning Outcomes:

After completing this practical, I learned how to create an admin dashboard using PHP and MySQL. I learned to display student statistics, event statistics and latest registrations from the database. I implemented Role-Based Access Control (RBAC) to restrict access according to user roles. I also learned to create role-based navigation menus and maintain audit logs for login and logout activities. Finally, I tested admin and student access to verify that the system works correctly.

Faculty Remarks: (Keep this blank for faculty)
