Practical – 15

Practical Title : Final Integration, Testing, Documentation, GitHub Submission, and Local Deployment

Problem Definition: Integrate all modules into a single deployable StudentHub portal. Verify navigation, responsiveness, authentication, database operations, security checks, AJAX functionality, and documentation. Deploy locally using XAMPP/Apache virtual host and submit GitHub repository.

Theory :

1. Are all pages properly linked and navigable?

The website pages were checked to verify that navigation links open the correct pages. The homepage and main pages were tested through the local XAMPP server. Any broken links or incorrect paths should be corrected before final submission.

2. Are sessions, roles, validations, and database operations working end-to-end?

Student registration and database storage were tested. Login with correct and incorrect passwords and empty-field validation were also checked. Session handling, role-based access, and logout should be tested separately to confirm that users can access only the pages allowed for their roles.

3. Are security and accessibility checklists completed?

Input validation, password hashing, prepared statements, and role-based access help improve website security. Forms should have proper labels, clear error messages, and keyboard-accessible controls. All security and accessibility checks should be verified before marking them complete.

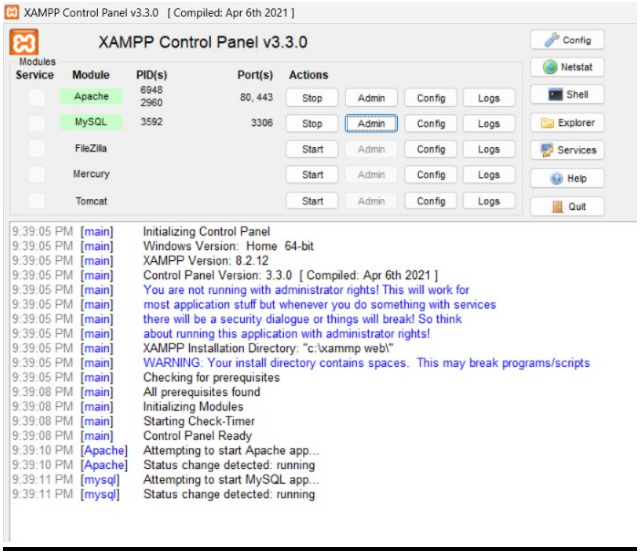

4. Is project documentation sufficient for installation and testing?

The README.md file explains the project and its setup requirements. The SQL database backup helps restore the database. A test report and screenshots provide evidence of important website features and testing results.

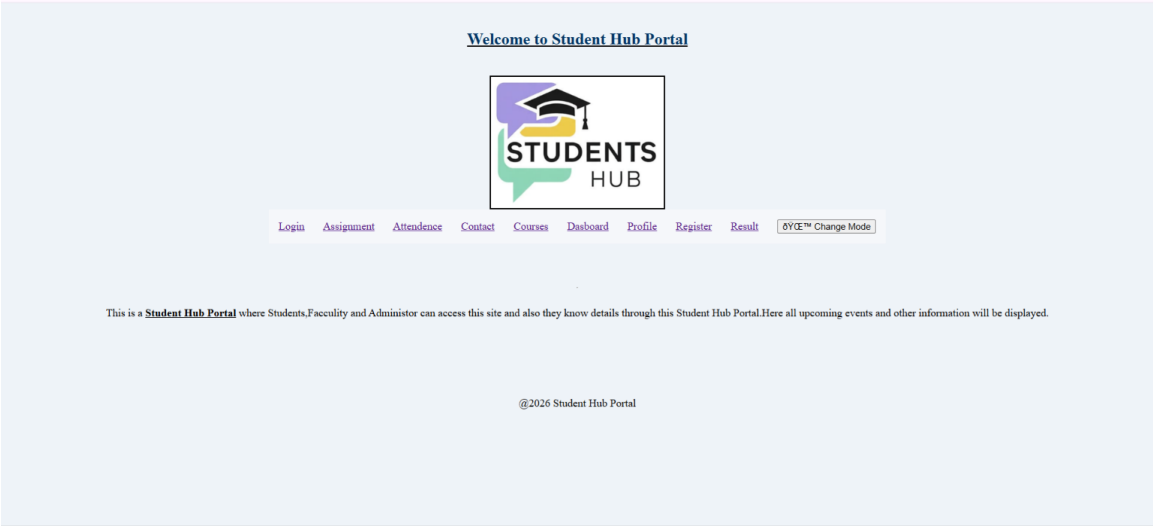

5. Is the project repository clean and properly committed?

The project repository should contain the required source code, documentation, SQL backup, and test report. Unnecessary files, passwords, database credentials, and other sensitive information should not be uploaded. Git commands such as git status, git add, git commit, and git push help manage and submit the project.

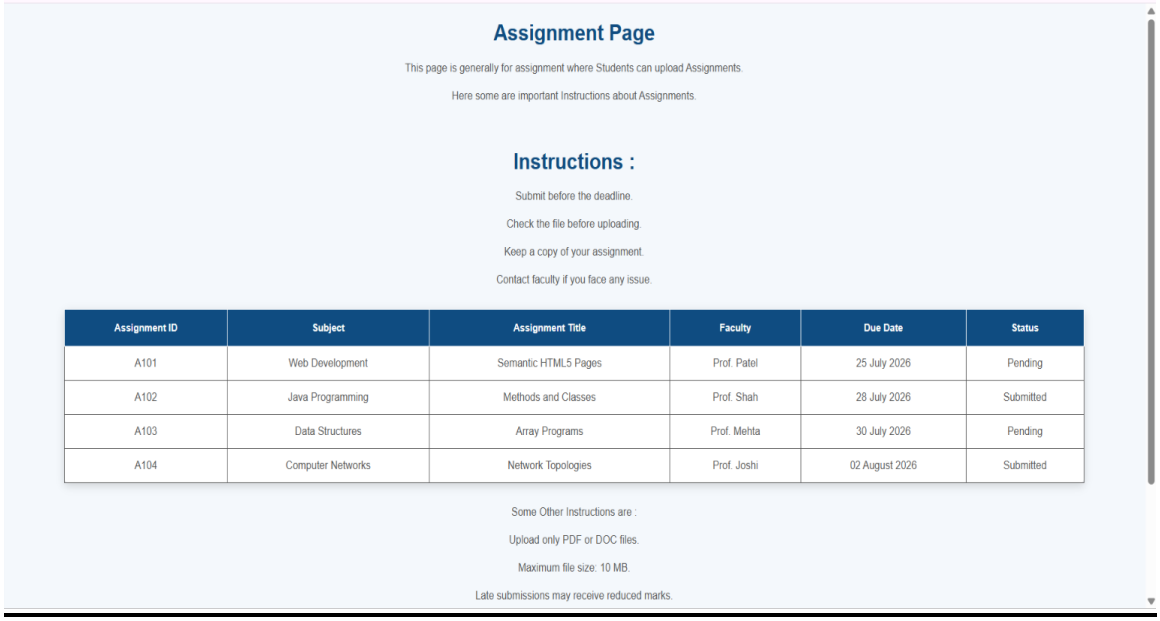

(1)Start XAMMP Local Host Server(APACHE and MYSQL Start):

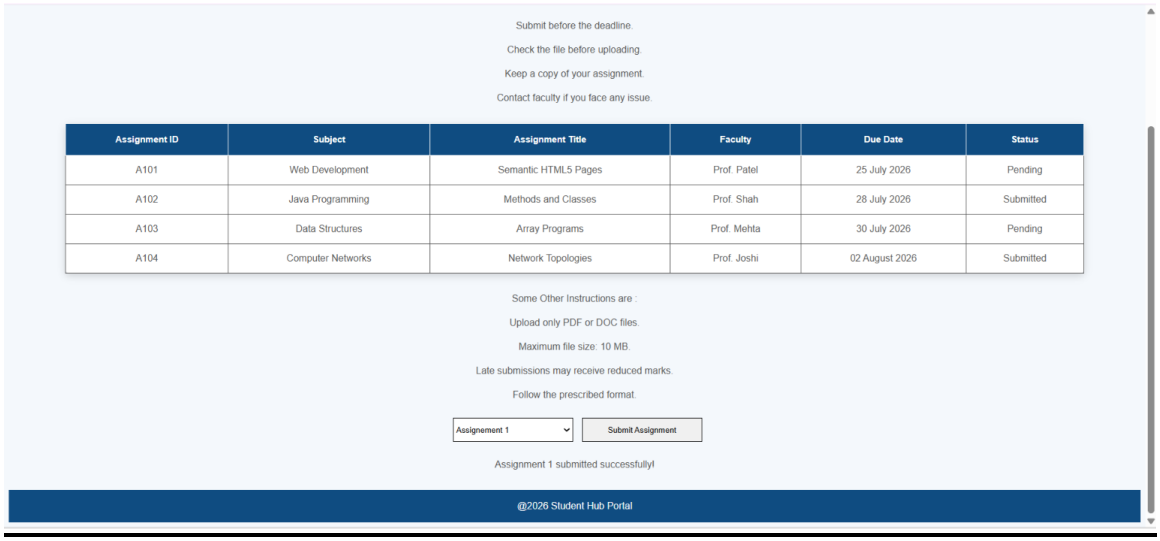

(2)Home Page:

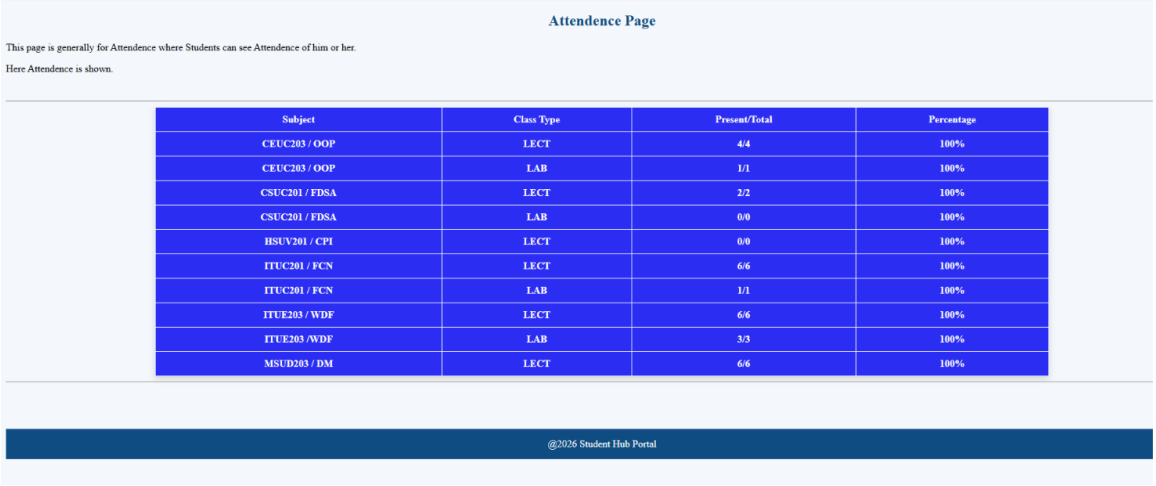

(3)Assignment Page:

(4)Attendance Page:

Attendence Page

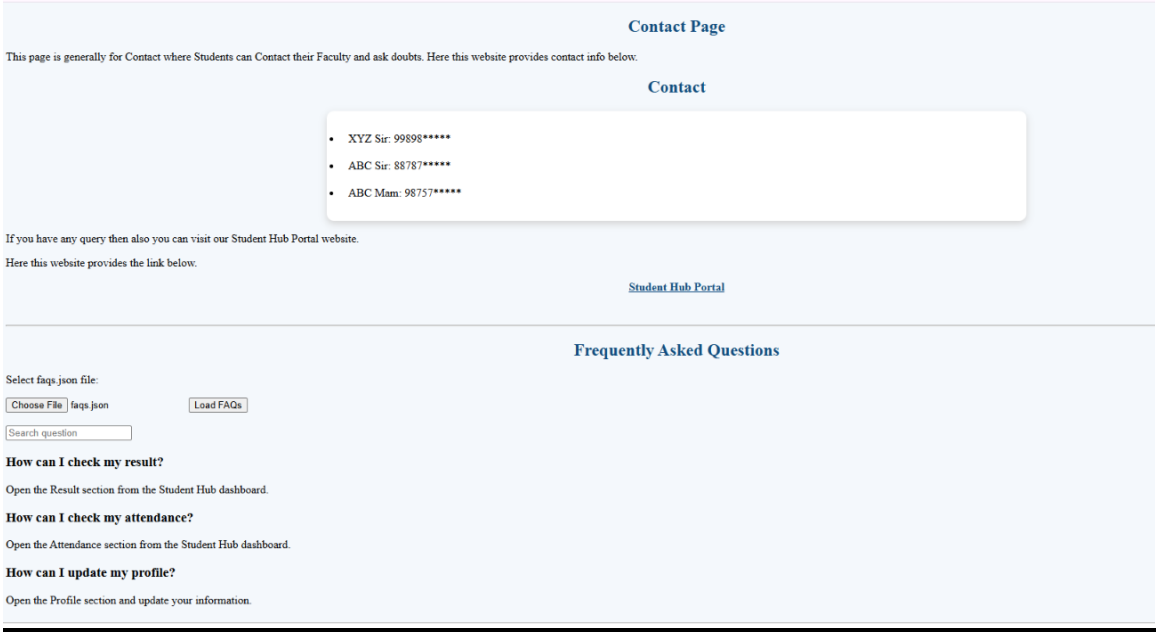

This page is generally for Attendence where Students can see Attendence of him or her.

Here Attendence is shown.

Subject	Class Type	Present/Total	Percentage
CEUC203 / OOP	LECT	4/4	100%
CEUC203 / OOP	LAB	1/1	100%
CSUC201 / FDSA	LECT	2/2	100%
CSUC201 / FDSA	LAB	0/0	100%
HSUV201 / CPI	LECT	0/0	100%
ITUC201 / FCN	LECT	6/6	100%
ITUC201 / FCN	LAB	1/1	100%
ITUE203 / WDF	LECT	6/6	100%
ITUE203 /WDF	LAB	3/3	100%
MSUD203 / DM	LECT	6/6	100%

(5)Contact Page:

Contact Page

This page is generally for Contact where Students can Contact their Faculty and ask doubts. Here this website provides contact info below.

Contact

- XYZ Sir: 99898*****
- ABC Sir: 88787*****
- ABC Mam: 98757*****

If you have any query then also you can visit our Student Hub Portal website.

Here this website provides the link below.

Student Hub Portal

Frequently Asked Questions

Select faqs.json file:

Choose File faqs.json Load FAQs

Search question

How can I check my result?

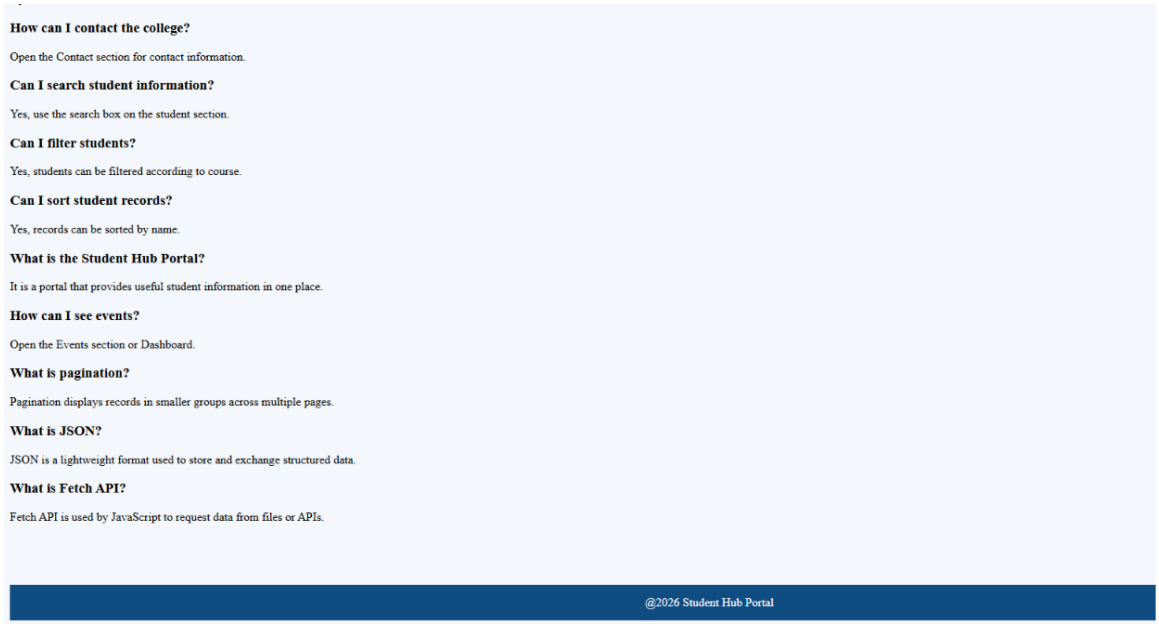

Open the Result section from the Student Hub dashboard.

How can I check my attendance?

Open the Attendance section from the Student Hub dashboard.

How can I update my profile?

Open the Profile section and update your information.

How can I contact the college?

Open the Contact section for contact information.

Can I search student information?

Yes, use the search box on the student section.

Can I filter students?

Yes, students can be filtered according to course.

Can I sort student records?

Yes, records can be sorted by name.

What is the Student Hub Portal?

It is a portal that provides useful student information in one place.

How can I see events?

Open the Events section or Dashboard.

What is pagination?

Pagination displays records in smaller groups across multiple pages.

What is JSON?

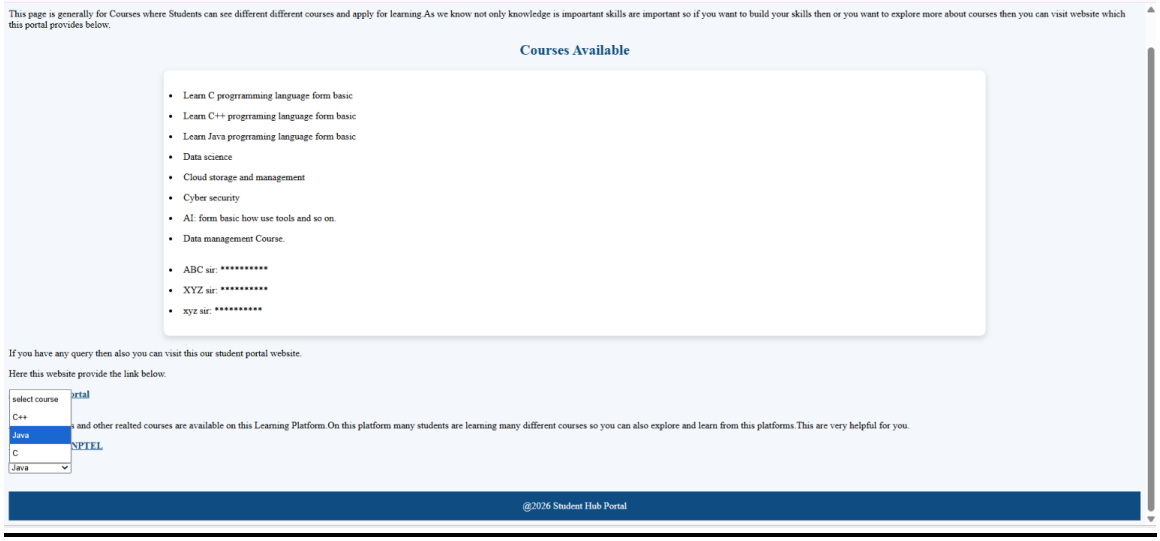

JSON is a lightweight format used to store and exchange structured data.

What is Fetch API?

Fetch API is used by JavaScript to request data from files or APIs.

(6)Courses Page:

This page is generally for Courses where Students can see different different courses and apply for learning.As we know not only knowledge is impoartant skills are important so if you want to build your skills then or you want to explore more about courses then you can visit website which this portal provides below.

Courses Available

- Learn C progrramming language form basic
- Learn C++ progrraming language form basic
- Learn Java progrraming language form basic
- Data science
- Cloud storage and management
- Cyber security
- AI: form basic how use tools and so on.
- Data management Course.

- ABC sir: **********
- XYZ sir: **********
- xyz sir: **********

If you have any query then also you can visit this our student portal website.

Here this website provide the link below.

ortal

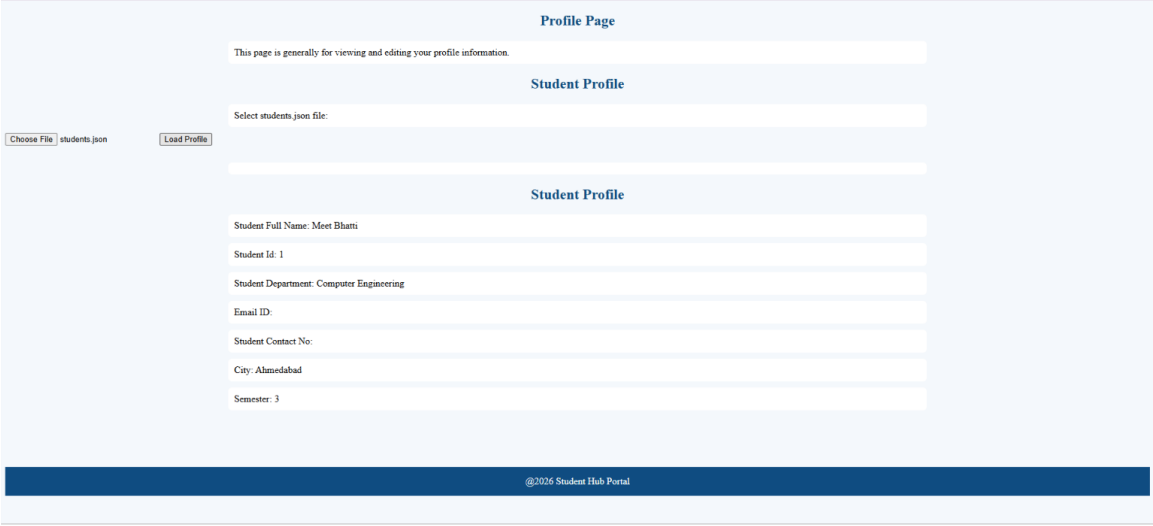

select course
C++
Java
C
Java

s and other realted courses are available on this Learning Platform.On this platform many students are learning many different courses so you can also explore and learn from this platforms.This are very helpful for you.

Learning Outcomes:

The Student Hub Portal was integrated and tested using HTML, CSS, JavaScript, PHP, MySQL, and XAMPP. The main website pages, student registration, database storage, and login validation were checked. Project documentation and the SQL database backup were prepared. The practical helped me understand website integration, testing, documentation, and local deployment.
